

Ushahidi Platform v2.x

Welcome to Ushahidi Platform version 2!

The Ushahidi platform is open source software that you can install on your server for information collection, visualization and interactive mapping. Examples of excellence using the Ushahidi platform can be found in [Types of Maps](#) and [Deployments of the Week](#).

This wiki section is dedicated to the current version of the Ushahidi platform, [Ushahidi v2.X](#). This will be replaced by a new version of the Ushahidi platform, [Ushahidi v3.X](#), that we're developing now.
