

Crowdmap

Welcome to Crowdmap!

About

Crowdmap is an entirely new, hosted service for mapping virtually anything on the web, focused on a more social mapping experience with better support for multimedia, sharing, and mobile support.

Crowdmap is for anyone wanting to tell a story with a map – not only through location but sharing photos, videos, and stories tied to a specific locations or entire regions.

There are two concurrent versions of Crowdmap. These pages are dedicated to the current version. Also see the wiki pages for [Crowdmap "Classic"](#)
