SwiftRiver

Welcome to SwiftRiver!

SwiftRiver is a platform that helps people make sense of large amounts of information in a short amount of time. It's also a mission to democratize access to the tools used to make sense of data - to discover information that is authentic, accurate and, above all, relevant - by:

- Gathering and filtering information from a variety of channels (RSS, Email, SMS, Twitter etc)
- Drawing insights from the collected information
- Allowing people to create buckets of information using their own expectations of authority and accuracy (instead of popularity).

SwiftRiver is free and open source.
