

Data Cleanup Project - Community Task

Ushahidi's community has many datasets. We want to help you release this data for research and learning. This means working with [Data Cleaning Guidelines](#), [CSV Upload Guide](#) and [Security and Privacy Resources](#).

Outline of the project:

1. Software: Are there existing data cleanup tools? University of Chicago [Data Science for social good fellows](#) are looking at a software way to standardize basic data cleaning.
2. Manual: Clean existing datasets that folks want to release. This includes datasets across many [Types of Maps](#) including Haiti, Kenya, and Nepal.
3. Guidelines: Build [Data Cleaning Guidelines](#)
4. Programs and Training: Create community training programs to help the community release the data. eg. Learning from the [School of Data](#) with Data Expeditions and more
