

Ushahidi v2.X Getting Involved

How to Get Involved

- Download, Install and use the product - See the [Ushahidi v2.X Installation guide](#)
- [Review our developer guide](#) to help you understand how the software works.
- Browse the [version 2.x repository](#) .
- Help us make our software better. Log any bug reports or feature requests you may have on our [Github issue tracker](#) .
- Better yet, for the version 2.x repository and send us pull requests for bug fixes/features you have built in.
- Connect with the wider ushahidi community and join in discussions:-
 - Sign up on the mailing list
 - Join our skype(add ngelzy) and IRC channels(#ushahidi on irc.freenode.net)

Small Asks

- Help us improve documentation on this wiki. If you don't have an account (for the wiki), click [here](#) to sign up for one!
- Create a Map Project. Be inspired by [Types of Maps](#) and [Deployments of the Week](#). Share feedback and lessons learned

Dev Help

With the build out of [Ushahidi version 3.0](#), the team put into effect a feature freeze on version 2.x, and is working on maintenance of the platform through bug fixes.

A list of prioritised bugs can be found on our [github issues](#) page. We'd appreciate any help from our larger the community, to help us fix these issues 😊.

- [High Priority](#)
- [Medium Priority](#)
- [Low Priority](#)

The feature freeze doesn't stop you from sending in pull requests for features you've built in. Send in a pull request and we'll be happy to merge it in if everything checks out! A list of [current feature requests can be found here](#).
