Security Technical Best Practices

Ushahidi is an open source software project. We aim to make the platform as secure as possible. It is your responsibility to train your users, test security and build privacy requirements for your project. We are here to support you with community efforts. While we try to create great software, the old adage applied: Sometimes there will be bugs, we fix them, and advise you.

(Thanks to John Etherton for this notice advisal.)

All security announcements are post on: Software Security Updates

How to report an issue:

- Review Software Security Updates for the current patches and download.ushahidi.com for the current version.
- Submit the issue to security at ushahidi dot com.
