

# Adding Collaborators

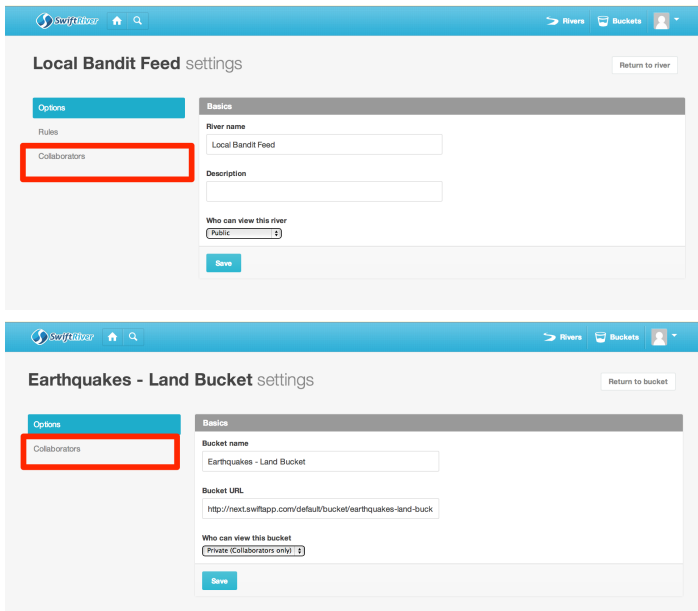

Collaborators can manage buckets/rivers they are invited to collaborate on. This means that they are able to:-

- Add new channels and/or rules to rivers
- Delete drops from rivers and buckets
- Add discussions to buckets

1. Click on your bucket/river settings icon

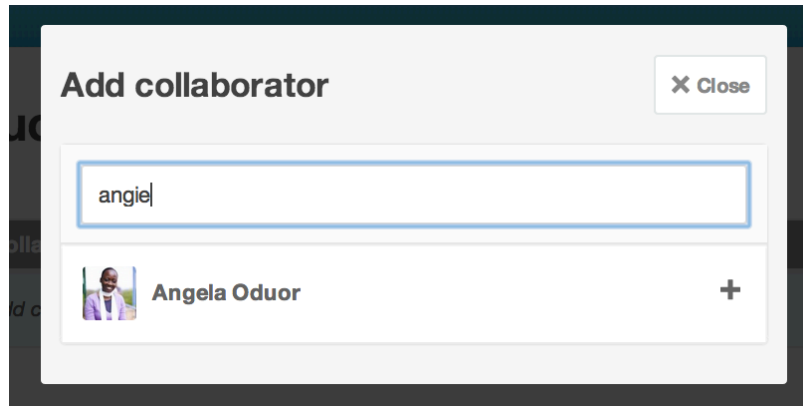

2. Click on "Collaborators"

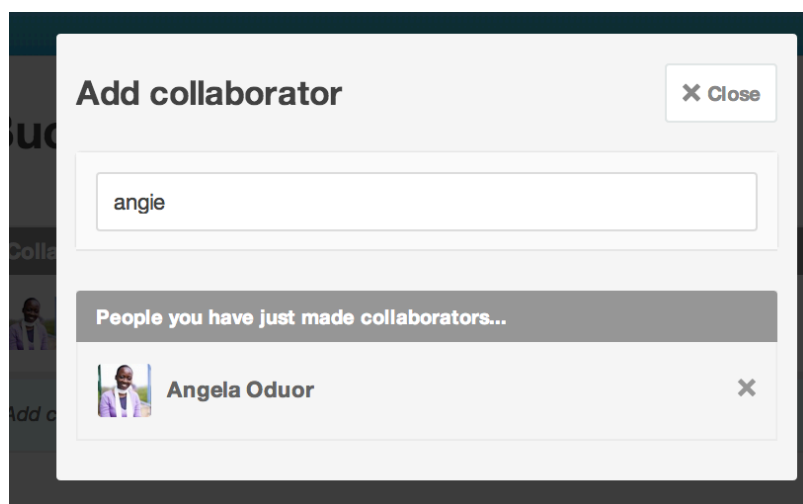

3. Click on "Add a collaborator"

4. Add the name of the user you would like to add as a collaborator. You'll notice, that as you type in the username, a list of users whose names match your input will begin to appear in a dropdown menu right under the textbox.

5. Click on the "+" icon on the user(s) you would like to add as collaborators, and close when done.

6. Your collaborators should now appear on your river/bucket collaborators page.
