

Installing the SwiftRiver stack on Windows

Unfortunately, at this stage, we don't have detailed information on getting SwiftRiver running on Windows systems.

However you can follow the [*nix systems instructions](#) and add your notes here as you go!

Notes

Java security keys

On Windows you might have issues with your maven compilation if your java is not using the [Java Cryptography Extension \(JCE\) Unlimited Strength Jurisdiction Policy Files](#).

Download and install them in case your maven is complaining.

Tomcat Class Paths

Also, make sure that your Tomcat is using the same Java Path as the one your Path variable. Or else, the JCE issues above might persist.
