Election Hackathon - Deployment review

The following are rough notes from the Election Hackathon held June 19th in London UK.

Feedback from an Election Monitor
He reviewed the DRC and Uchaguzi maps.

DRC Feedback

Contextual analysis- why is a category importantWhy humanitarian category on drc map?
Factual info vs inference are not separated
Judgement
The categories don't have a logical flow
Elections are linear
Procedure issues vs materials deficiency
Recommends- give template of standard category by Country
Some of the Categories need time related ; there is a chronological orders for elections. Like posters pre-elections
Categories exist without definitions
Can get uniform overlay

Uchaguzi Feedback

Security and actors need to be separated
There is a judgement by stating police as a category

Recommends:
Common framework. Incident reports provide specific
One world -framework , put deviant data as an incident report as a separate layer

Needs to none some sifting
Needs to figure out how time is mixed in
