

Versioning

Versions in the Ushahidi Platform follow a simple incremental step process that can tell you which major version, regular release and official patch (security, hotfixes, etc) you are on. Versions can include either two or three numbers. Versions with two numbers do not have any official patches applied.

Ushahidi is currently on version 2.7

Example breakdown:

MAJOR VERSION		REGULAR VERSION		PATCH VERSION
2	.	3	.	4

2.3.4 - This says you are on Ushahidi 2, on the 3rd regular release, on the 4th patch for that particular release.
