

Configuring data source in Ushahidi V3 from the config UI

To configure data sources from the configuration's user interface(UI), you have to make sure the `data_provider_config` feature is enabled.

1. Go to WORKSPACE -> Site Settings.
2. Make sure `data_provider_config` is ticked. Otherwise tick the checkbox.
3. Then hit the Save Features button to enable it.

See sample screenshot of the Site Settings page.

Save Features

With the `data_provider_config` feature enabled, you can now configure the available data sources.

1. Go to WORKSPACE -> Incoming Messages -> Messages Configurations
2. Then select the data source you want to configure by clicking on the Configure link below the name.
3. Fill the data source's configuration page with the values the fields are asking for. The fields have been explained so it's easier to follow the form.
4. Make sure you save the changes.

To enable a data source, click on the Enable link below the name.

See sample screenshot of the Messages Configuration page.
