

Creating rivers

Create a new river

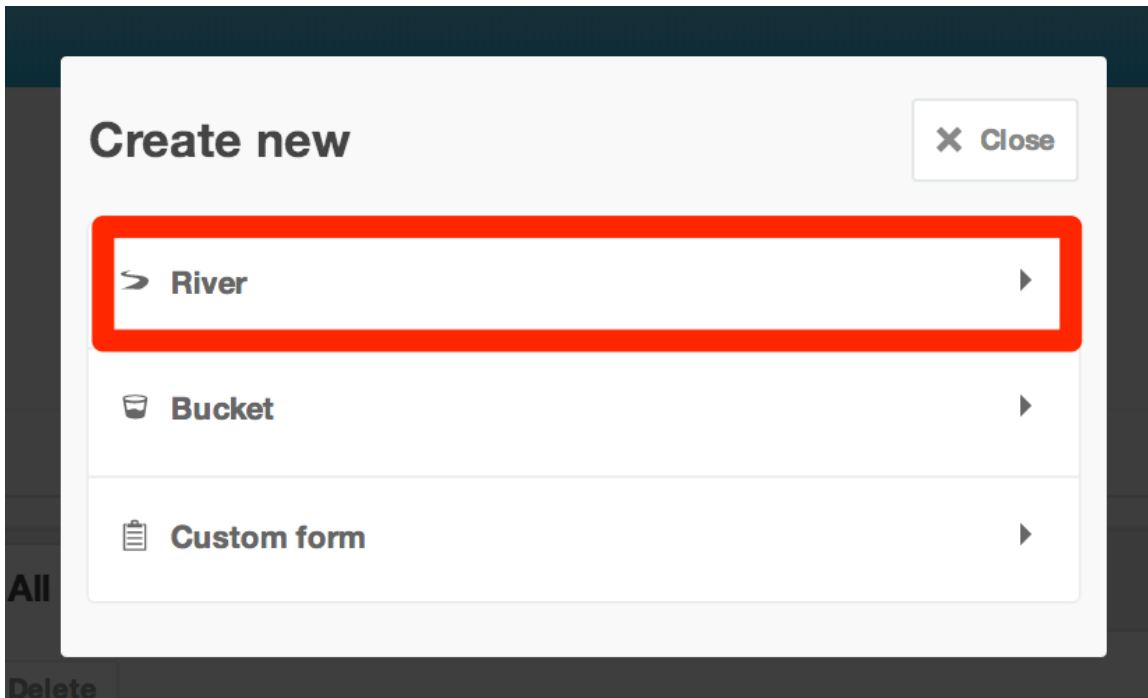

You can initiate river creation in two ways,

1. From your content stream dashboard

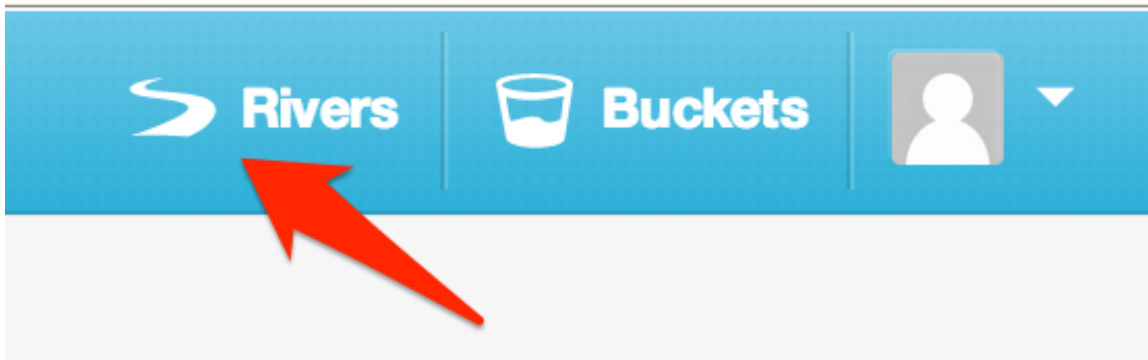

The screenshot shows the Swift River dashboard interface. At the top, there's a blue header with the Swift River logo, home and search icons, and navigation links for Rivers, Buckets, and a user profile. Below the header, the user is identified as 'Administrator' with '0 followers, 3 following'. The main content area has tabs for 'Activity' and 'Content', with 'Content' being the active tab. On the left, there's a sidebar with 'All your stuff' and links to 'Rivers', 'Buckets', and 'Forms'. The 'Rivers' link is highlighted. The main content area displays a list of rivers under the 'All' tab. Each river entry includes a title, a 'drops' count, a progress bar, and a '0% full' status. A red arrow points to the '+ Create new' button in the top right corner of the river list.

River Name	Drops	Status
Earthquakes	51 drops	0% full
Kenyan Blogs Feed	509 drops	0% full
Kenyan Tech Scene	268 drops	0% full
Local Bandit Feed	9616 drops	0% full
WEF Tracker	1610 drops	0% full
Business Articles	131 drops	0% full
eyedol / Azonto River	0 drops	0% full

2. From the top right hand corner of your header

Create the river

Click on "Create the river"

Congratulations, your river has been created. You still have to add channels for your river to begin flowing. Let's move on to the next step.

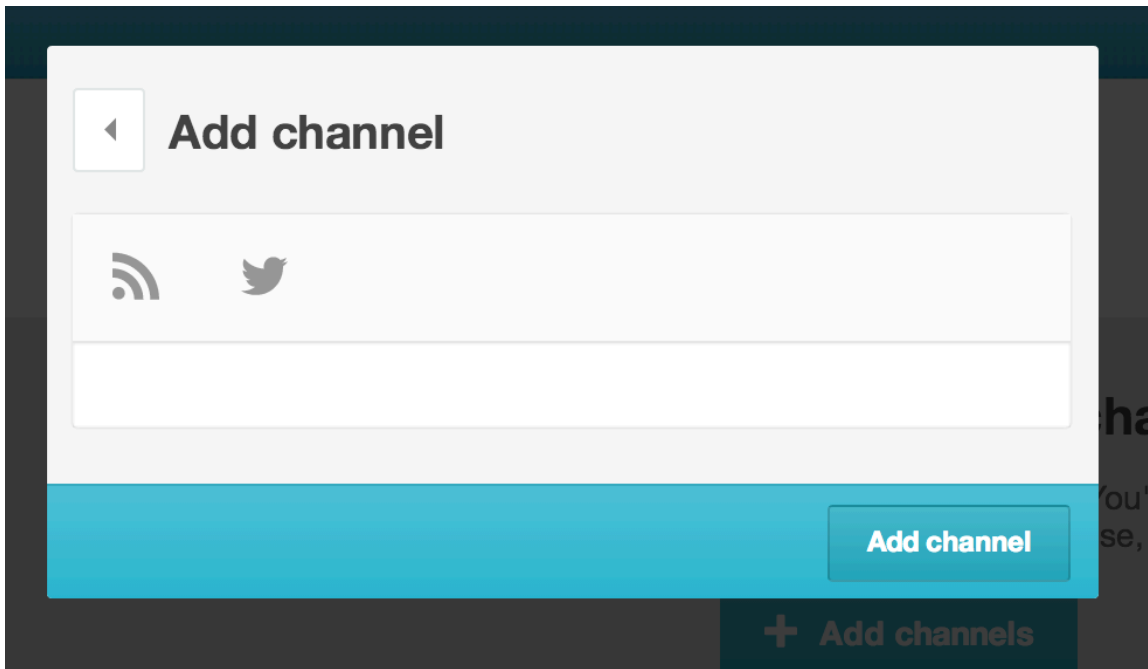

Adding channels

After creating your river, you get redirected to your river dashboard. Click on "Add Channels"

At the moment, SwiftRiver supports two sources:-

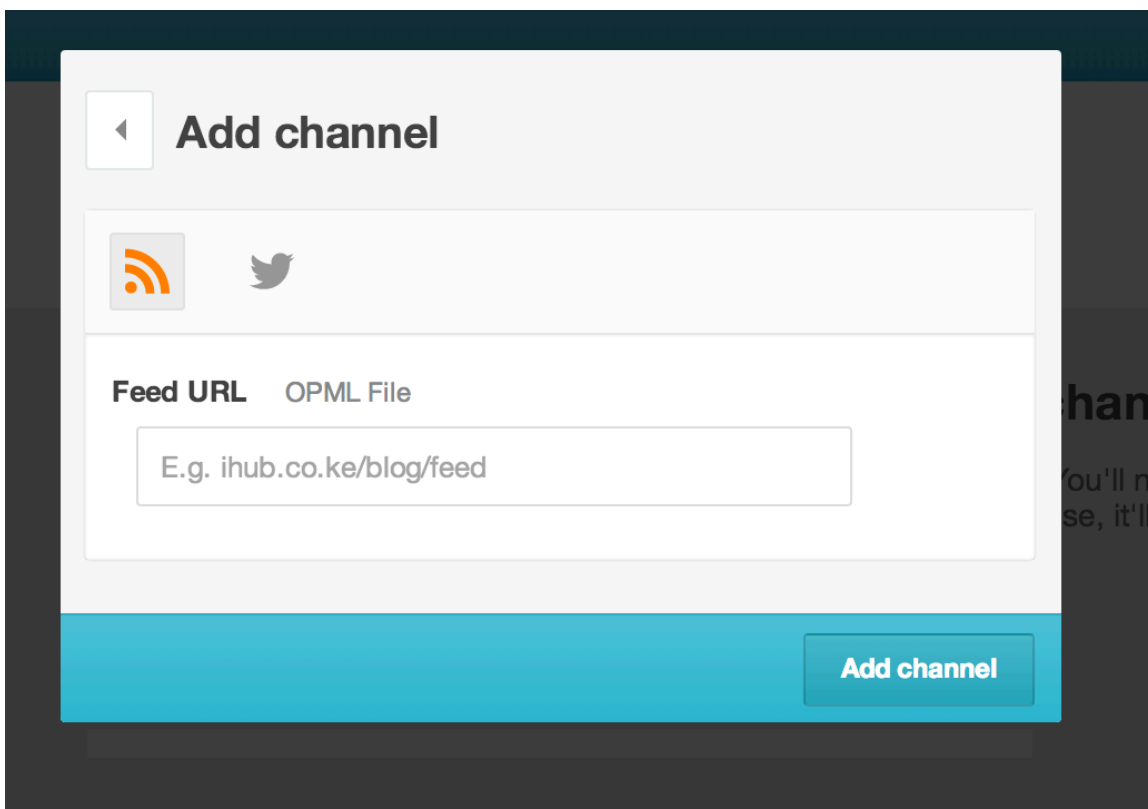

- RSS
- Twitter

The screenshot shows a modal dialog titled "Add channel" with a back arrow icon. Inside the dialog, there are two icons: an RSS icon and a Twitter icon. Below the icons is a large, empty text input field. At the bottom right of the dialog is a blue button labeled "Add channel". In the background, a dark sidebar is visible with a "+ Add channels" button.

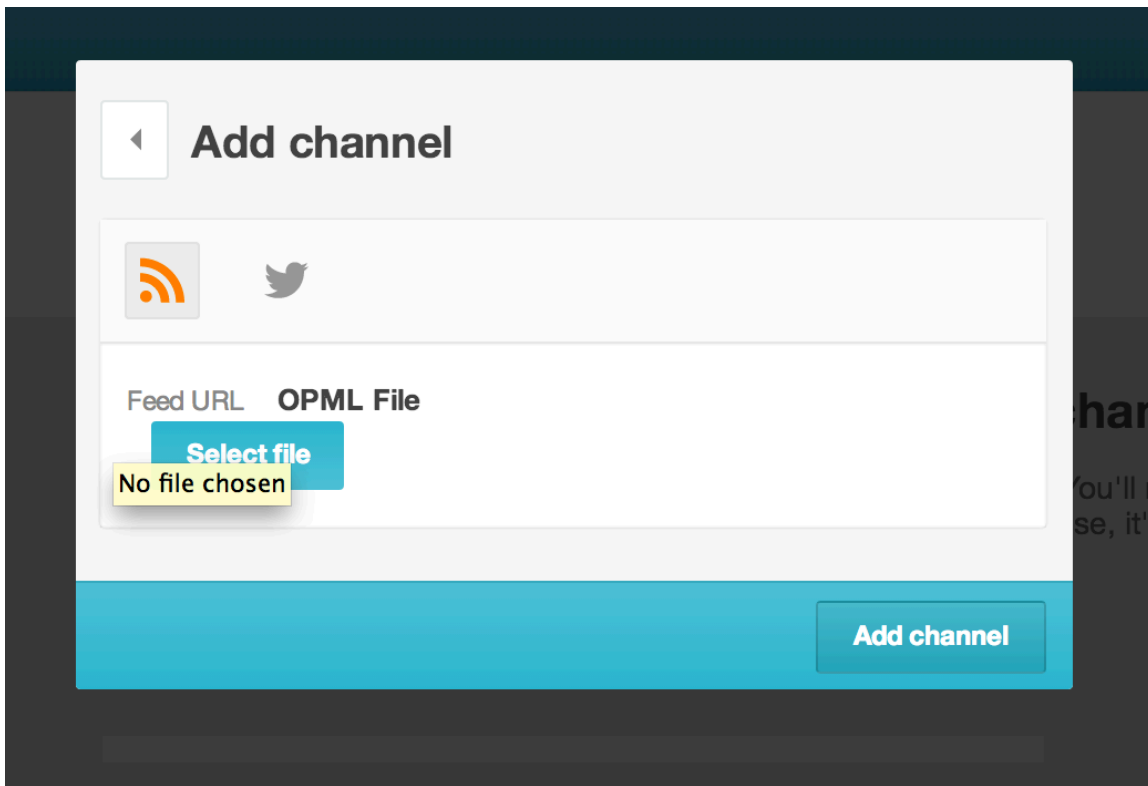

RSS

You can either add a feed URL,

This screenshot shows the same "Add channel" dialog box, but with the "Feed URL" tab selected. The "OPML File" tab is also visible. The "Feed URL" input field contains the placeholder text "E.g. ihub.co.ke/blog/feed". The "Add channel" button remains at the bottom right.

Or upload an [OPML](#)(Outline Processor Markup Language) file.

Twitter

You can add keyword filters, or choose to select tweets from specific users.
