

Ushahidi 2.7.3 Community Test Day

Release Testing Help wanted

You've been reporting bugs via [Github](#) and the [Forums](#). Our team has been busy collaborating with community members to get fixes prepared. We need your help to test the release alongside our QA cohort and team.

Key Dates:

- Code Freeze: 10th April 2014
- Testing: 14th to 20th April 2014
- Community Co-testing Day: 16th April 2014
- Fixes: 21st April 2014
- Crowdmap Classic Upgrade: 22nd April 2014
- Crowdmap Classic Tests & Overview: 23rd April 2014
- 2.7.3 Release: 23rd April 2014

Community Test Day

Testing is more fun when we do it together. The Ushahidi team will be online to co-test. [Join Us](#).

Date: Wednesday, April 16, 2014 / Thursday, April 17, 2014

Times: Wednesday, April 16, 09:00 EAT to Thursday, April 17, 2014 12:00 pm EAT

Your Local Time: <http://bit.ly/1ij228f> to <http://bit.ly/1t1nVOu>

To join this virtual online event, login to skype or irc. See [Contact Us](#) for details to find how how to connect. Introduce yourself. See the main bug tracking spreadsheet(below) or tagged github items (below). Add your items. Ask questions

How to help

If you are a server ninja, you can download the [release candidate and test away](#). We also have a [test server](#) with you can simply login and be a pirate tester. Reminder: Crowdmap Classic uses the same software code base as Ushahidi platform, so testing.usshahidi.com will be almost like testing on Crowdmap Classic.

1. Login to Test Site: site – <http://testing.usshahidi.com> username = testing@ushahidi.com password = admin2014

2. Test and Identify bugs: There are two ways to give feedback on the release candidate:

- [Add an issue to GitHub](#)
- [Add the bugs to this spreadsheet to track feedback](#).

3. There are 13 bugs fixes. We know that you have limited time, so even testing one of these items will help everyone. The full list is on the [Test Spreadsheet](#) and in [Github](#).

Reporting a Bug

We are asking all bugs to be flagged on the spreadsheet. [Report a bug guidelines](#)

Here are some top level items:

General Fixes

- [Category import on CSV import](#):
- [Broken video embeds in reports when viewed over HTTPS](#):
- Install errors: [1321](#) and [1337](#)
- Dual alert sign-up: [1316](#) and [1339](#)
- Links back to reports – smssync: [SMSSync #140](#) and Ushahidi [#1334](#)
- [Parent category list in edit report new category](#)
- [Timeline upgrade](#)

Thanks in advance to all those who reported these bugs, helped fix and test them.
